

Cartes de phase Jason 2, cycles 1-17

Flavien Mercier, Luca Cerri
CNES DCT/SB/OR

1 Cartes

Les cartes ont été générées par moyennage des résidus de phase sur les cycles 1-17 de Jason2, après synchronisation des dates (de façon à moyenner les mesures les plus proches en site et azimuth). Les paramètres ajustés par passage sont : l'allongement troposphérique à la verticale, une ambiguïté par paquet de mesures sans saut de phase, et un polynôme de degré 3.
